```javascript
// TaskFilter.js
import React, { useState } from 'react';
import { useTaskContext } from '../TaskContext';

const TaskFilter = () => {
  const [filterText, setFilterText] = useState('');
  const { dispatch } = useTaskContext();

  const handleFilter = (e) => {
    const text = e.target.value;
    setFilterText(text);
    dispatch({ type: 'FILTER_TASKS', payload: text });
  };

  return (
    <div>
      <input
        type="text"
        value={filterText}
        onChange={handleFilter}
        placeholder="Filtrar tareas..."
      />
    </div>
  );
};

export default TaskFilter;
```
