```javascript
// TaskList.js
import React from 'react';
import { useTaskContext } from '../TaskContext';

const TaskList = () => {
  const { tasks, dispatch } = useTaskContext();

  const handleDelete = (id) => {
    dispatch({ type: 'DELETE_TASK', payload: id });
  };

  return (
    <ul>
      {tasks.map((task) => (
        <li key={task.id}>
          {task.text}
          <button onClick={() => handleDelete(task.id)}>Borrar</button>
        </li>
      ))}
    </ul>
  );
};

export default TaskList;
```
